STATEMENT **OF** WORK

Prepared by:

Hamzaoui Hanafi Abderraouf

Bendahmouche abderaouf

Supervised by:

Dr. Nasri

1. Project Overview

Project Description: The Directorate of Transport oversees the movement of hazardous materials such as diesel and gas between designated locations. This activity requires strict compliance with safety regulations and the possession of special licenses issued by the authorities.

Currently, all transport records — including company details, vehicle registrations, routes, and license information — are written manually in physical books. This manual process is prone to errors, delays, and difficulties in verifying compliance with regulations.

The proposed software solution will:

- Digitize all transport records into a local database stored on a single PC in the bureau "نقل المواد الخطرة".
- Provide structured forms for entering key information:
 - Record number
 - Signature date
 - Transport company or carrier name and surname
 - Registration number
 - Company address
 - Vehicle registration number
 - Vehicle type and category
 - Route (origin, destination, checkpoints)
 - License expiration date
 - Carrier type (Public or Private)
 - Account type (Public or Private)
 - Hazardous materials transported (diesel, gas, etc.)

- Provide search and filtering tools to quickly retrieve records.
- Generate statistics for management oversight (e.g., number of vehicles, number of licensed drivers, expired licenses).
- Send automatic email notifications to drivers when their license is about to expire within 10 days.
- Reduce human error and eliminate inconsistencies caused by manual record-keeping.

2. Objectives

Qualitative Objectives

- Eliminate manual errors by replacing handwritten records with digital forms.
- Enhance operational efficiency by speeding up data entry, retrieval, and reporting.
- Strengthen transparency by maintaining clear, accessible digital records.
- Modernize the Directorate's image as a technologically advanced and safety-conscious organization.

Quantitative Objectives

- Digitize at least 80% of hazardous material transport records.
- Reduce administrative errors by at least 80%.
- Achieve record retrieval times under 10 seconds.

Target Users

- Internal staff: Administrative employees responsible for data entry.

3. Technical Characteristics

Supported Operating Systems

- Windows (primary target, for Directorate computers).

Type of Software

- Category: Hazardous Material Transport Management Software.
- Distribution: Proprietary, internal use only.
- Licensing: Restricted to Directorate of Transport staff.

Database Management

- Local SQL-based database (SQLite) stored directly on the PC.
- Secure backups performed locally or on external drives.

Statistics & Analytics Dashboard

- Real-time statistics on:
 - Total number of vehicles registered for hazardous material transport.
 - Total number of licensed drivers.
 - Number of active vs. expired licenses.
 - Number of transports completed per day/week/month.

License Monitoring & Notifications

- Automatic tracking of driver and vehicle license expiration dates.
- Email alerts sent to drivers when their license is about to expire within 10 days.
- Configurable reminder intervals (30, 10, 5 days).
- Admin dashboard notifications for upcoming expirations.

4. Technical Constraints

Infrastructure & Deployment

- Installed and operated on one single PC located in the bureau "نقل المواد الخطرة".
- No external server or cloud deployment — all data stored locally.
- Internet connectivity required only for email notifications.

Database & Storage

- SQLite database stored directly on the PC.
- Capacity scalable to thousands of records (drivers, vehicles, routes, licenses).

Performance

- Optimized for single-user or small-team usage on one PC.
- Record retrieval time under 10 seconds.
- Automated license expiration checks performed daily.

Communication & Notifications

- Integrated email system for sending alerts.
- Configurable notification intervals (30, 10, 5 days).

Limitations

- Proprietary use only — restricted to Directorate staff.
- No public distribution.
- No multi-PC or network deployment.

5. Structure

Software Architecture

- Standalone application installed on one PC only.

- Local database stored directly on the machine.
- Modular design: data entry, search, reporting, notifications.

User Interface Structure (Arborescence)

1. Dashboard (Home Page)

- Overview of statistics: vehicles, drivers, active vs. expired licenses, upcoming expirations.
- Quick links to main functions.

2. Data Entry Module

- Forms for:
 - Company/carrier details (name, registration, address).
 - Vehicle details (registration, type, category).
 - Route details (origin, destination, checkpoints).
 - License details (expiration date, public/private carrier, account type).
 - Hazardous material details (type, quantity).

3. Search & Records Module

- Search by driver, vehicle, route, or material type.
- Filtering options (active licenses, expired licenses).

4. Notifications Module

- Automatic email alerts for license expiration.
- Configurable reminder intervals (30, 10, 5 days).
- Admin notifications for upcoming expirations.

5. Settings Module

- Backup options (local or external drive).

6. Deliverables (Expected Outputs)

The contractor is expected to deliver the following:

- **Software Application:** Fully functional standalone program installed on the designated PC in the bureau "نقل المواد الخطرة".
- **Database:** Local SQLite database containing all required fields (record number, company details, vehicle details, route, license expiration, carrier type, account type, hazardous materials).
- **User Interface:** Dashboard, data entry forms, search module, notifications module, and settings module as described in Section 5.
- **Statistics Dashboard:** Real-time overview of vehicles, drivers, active vs. expired licenses, and upcoming expirations.
- **Email Notification System:** Automatic alerts sent to drivers when their license is about to expire within 10 days, with configurable intervals.
- **Documentation:**
 - User manual (basic instructions for staff).
 - Technical documentation (installation, configuration, backup procedures).
- **Training:** Short training session for staff on how to use the software.
- **Warranty Period:** forever of support for bug fixes and minor adjustments.
